

Customized Products

At **REBOTEC®** the saying:
"It can't be done" doesn't
exist.

Special circumstances often require
special solutions.

Should the right solution not be
found in our wide range of
Rollators, or should you require
an individual, customized product -
then just let us know.

Our specialists in customised
construction will measure, calculate
and build your individual Rollator -
tailored to suit your body's specific
ergonomic requirements.

This is the approach we use to
produce solutions for special body
sizes and weights. We optimise
dimensions and materials - to keep
you mobile day after day.

That's the level of quality you'll
always find at **REBOTEC®**.

Examples:

- size adjustments for large persons
- increasing stability by using
stronger tubing and materials
- wheels for higher loads, or tires
with special rubber compounds
- customised technical modifications
- special upholsteries
- special colours
