Dedicated to glamour and well-being of all women around the world

SOLIDEA by Calzificio PINELLI, a leading manufacturer of graduated compression stockings and tights, dedicates this catalogue to all women of the world.

SOLIDEA, an acronym for solar idea, introduces you to a world that is full of life, well-being and energy, the driving forces behind our existence.

An Enzo Pinelli inspiration for the health and well-being of women, and especially, of women's legs.

Today, while the mainstream focuses on seeking after a model that is always new, and always fleeting, SOLIDEA wants to interpret timeless fashion, inspired by the well-being of your legs. Well-being embodies the basics of prevention, for the purpose of therapeutic actions with optimum solutions that are developed, tested and produced with total respect for women's health. SOLIDEA shows women how to attire their legs with increasing glamour and even more well-being.

SOLIDEA by Calzificio PINELLI is totally controlled by the Pinelli family which suggests its strategies for constant and ongoing growth. Thanks to an efficient customer service and a widespread network of business partners and agents, SOLIDEA can currently be found in more than 70 countries throughout the world and in more than 15,000 points of sale in Europe, always offering unparalleled quality.

Night Wellness 70 opaque

open toe

12/15 mmHg graduated compression infrared-ray stockings specifically designed to be worn during nocturnal sleep. The self-supporting flounce tops are made using the latest generation of silicone elastomer, which is much more tolerable than traditional silicone. Graduated compression aids the physiological reduction of leg girth during sleep, with an improvement of size reduction. Made with yarn containing a mineral additive that, stimulated by the body's natural thermal energy, converts it into FIR (infrared rays) and sends it back into the skin tissue with a pleasant temperature control effect. This action, along with graduated compression, helps tone up the skin and maintain smooth and velvety skin. Enriched with Sanitized® hygienic function. Wearing these good looking stockings, constantly helps you get up in the morning in top form and with more slender legs.

SILVER WAVE

Fabric texture with patented three-dimensional waves.

This patented high technology special wave fabric exerts an effective micromassage on the skin thanks to natural body movements. This stimulates cutaneous capillary circulation impaired by cellulite, preventing swelling (edemas) of the legs and favoring elimination of excess liquids. SILVER WAVE panties constitute a specific treatment to fight cellulite and water retention. Effectiveness and results are increased when they are worn during physical activity. SILVER WAVE line comes in various lengths to meet the needs of all women's legs. Clinical tests have demonstrated the effects from wearing SILVER WAVE panties, confirming quick results in terms of tissue tone and reduction of the "orange peel" effect.

MECHANICAL MICROMASSAGE FUNCTION

Treatment start

Treatment effect

SILVER WAVE products are totally hygienic. SOLIDEA guarantees these characteristics with its customized BACTERIOSTATIC that ensures the exceptional hygiene offered by its products, SILVER WAVE products, thanks to this characteristic, can be worn as undergarments all day long.

BACTERIOSTATIC YARN

An inorganic silver-base bacteriostatic agent is inserted in the fibres and protected by a slow release system. This prevents bacteria from proliferating on fabrics. Silver ions perform their bacteriostatic function by preventing reproduction of pathogenic micro-organism (bacteria).

Silver ions

Permanent slow release

Silver ions are permanently present in the fabric used in SOLIDEA SILVER WAVE products, maintaining long-term bacteriostatic characteristics. SOLIDEA SILVER WAVE products maintain bacterial flora at natural levels, preventing the onset of unpleasant odors.

SILVER WAVE shorts combine effective micromassage functions with regenerating compression, stimulating cutaneous capillary circulation. The active micromassage by the fabric generates light furrows on the skin. This is a sign that the draining effect is efficient. These furrows disappear in a few hours, leaving the skin smooth and excess fluids free

Silver Wave Abdominal Band

The light compression in this soft elastic abdominal band hugs and shapes hips and abdomen and is also an excellent lower back support. The patented three-dimensional wave fabric actively micro-massages the skin, stimulates microcirculation and detoxifies the skin. Fabric is light and breathable, fits like a second skin for all-day wearing comfort and is invisible under clothing. Its real silver ions in the fibre inhibit odour and bacteria and maintain a natural skin balance.

cod. 0433A5 *Silver Wave Slimming Sleeves*

Micromassage stitchless sleeves extending up to the wrist designed to fight orange-peel appearance on the arms with an innovative dorsal support that holds them up and wraps around the shoulders for perfect wearability. Natural movements by the upper limbs, thanks to the micromassage fabric, stimulate microcirculation for the purpose of an effective anticellulite action. We recommend, for best results, that these be worn every day and all day long. They can also be worn when exercising to increase their benefits. Decreasing graduated compression 15/21 mmHg from the wrist to the shoulder; helps improve venous reflux and lymphatic drainage, making these articles suitable in case of post-trauma and iatrogenic (mastectomy) lymphedema of the upper limbs. They are made using silver ion bacteriostatic yarns that ensure the natural biological balance of the skin and natural transpiration, keeping the skin healthy and protected against bad odors.

Three-dimension
wave fabric
texture with
infrared ray yarn

The special three-dimension wave fabric has a beneficial micromassage action that aids microcirculation and eliminates excess liquids while reducing body mass and creating a breathable and ventilated effect that prevents the onset of bad odors.

The yarn also contains a mineral additive which converts the thermal energy of the human body into FIR (Far Infrared Rays), sending a pleasing temperature-control effect back to skin tissue.

The synergy of these characteristics:

- helps oxygenate cells,
- increases metabolism between blood and skin tissue,
- acts effectively against formation of cellulite,
- thighs, buttocks and abdomen improve in tone and appearance.

cod. 0477A5 *Red Wave Bermuda*

Compression model of Bermuda shorts. The special three-dimension wave fabric has a beneficial micromassage action that helps to eliminate excess liquids while slenderizing the body mass and creating a transpiring and ventilated effect to prevent the onset of bad odours. Made with yarn containing a mineral additive that when stimulated by the body's natural thermal energy, converts it into FIR (Far Infrared Rays) and sends it back to the tissue, with a pleasant temperature-control effect. The double action of the FIR with the micromassage fabric, helps reduce cellulite and improve microcirculation. Enriched with the Sanitized® hygienic function. To obtain the aesthetic effects by this yarn we recommended wearing Red Wave Bermuda every day at least 8 hours a day.

cod. 0507A5 *Micromassage Armbands Ccl.1*

Pair of 15/21 mmHg seamless armbands that extend from the arm up to the wrist, with decreasing graduated compression from the wrist to the arm. The micromassaging fabric, combined with natural movements of the arms, stimulates microcirculation for an effective anticellulite action. A supporting flounce made with a new generation of silicone elastomer; is well tolerated even by the most sensitive skins. The yarn contains a mineral additive, which is stimulated by the natural thermal energy of the body, converting this energy into FIR (Far Infrared Rays) and sending it back to the skin tissue, giving a pleasing temperature-control effect. This action strengthens the graduated compression function, stimulating correct venous and lymphatic return and acts effectively to reduce the edema. Suitable for conservative treatment of post-trauma and iatrogenic lymphedema. With Sanitized® hygienic function.

HOW TO DETERMINE THE PROPER SIZE tights, stockings and single-leg tights Solidea Therapeutic

To obtain maximum benefit from the stocking the leg must be correctly measured: for this purpose, technical or specialist assistance is recommended. The measurements should be taken preferably in the morning when the legs are less edematous.

MEASUREMENTS TO BE TAKEN:

- Circumference of the ankle (c B) at the narrowest point. This is the point of maximum pressure.
- Circumference of the leg at the highest point reached by the stocking; depending on the model, this will be:
 - stockings reaching the groin: the circumference at the point just below the groin (c G)
 - Half way up the thigh: the circumference at the point half way between the groin and the knee (c F)
 - knee-length stockings: the circumference at the point just below the knee (c D)
- The length must be measured from the base of the foot (a) to the highest point reached by the stocking; and it will be, therefore:
 - (l G) for tights and for stockings up to just below the groin;
 - (l F) for stockings reaching half way up the thigh;
 - (l D) for knee length stockings.

SOLIDEA's therapeutic stockings are made using high-tech and innovative yarns that maintain extraordinary elasticity with the passage of time.

These features have revolutionized the concept of therapeutic stockings up to now on the market.

• The weight / height ratio table can be used to select the right size for limbs that are not particularly edematous (not too swollen).

• For swollen limbs you must refer to the circumference table. In this case measure limb circumferences at the points described above.

HOW TO DETERMINE THE PROPER SIZE knee-length stockings Solidea Therapeutic

To obtain maximum benefit from the stocking the leg must be correctly measured: for this purpose, technical or specialist assistance is recommended. The measurements should be taken preferably in the morning when the legs are less edematous.

aD
knee-length
stocking

MEASUREMENTS TO BE TAKEN:

- Circumference of the ankle (c B), at the narrowest point. This is the point of maximum pressure.
- The circumference at the point just below the knee (c D)
- The length must be measured from the base of the foot (a) to the highest point reached by the knee-length stocking (l D).

SOLIDEA's therapeutic knee length stockings are made using high-tech and innovative yarns that maintain extraordinary elasticity with the passage of time. These features have revolutionized the concept of therapeutic stockings up to now on the market.

- When limbs are not particularly edematous (not too swollen) just refer to the size.
- For swollen limbs you must refer to the circumference table. In this case measure limb circumferences at the points described above.

Micromassage Gauntlet Ccl. 2

Elastic-compression ambidextrous gauntlet for conservative and therapeutic treatment of hand and forearm lymphedema. The special patented micromassage wave fabric aids microcirculation. The strong graduated compression 25/32 mmHg stimulates correct venous and lymphatic return and acts effectively to reduce the edema. The micromassage wave fabric permits natural transpiration, letting the skin breathe and keeping it dry and protected. It can be worn both alone and combined with an elastic-compression armband. With hygienic Sanitized® function.

Diabetic Knee-High **NEW**

closed toe

Knee-highs made with a very fine weave that makes the fabric extremely soft, lightweight and breathable, with a slight compression that makes the stocking adhere well to the leg. Toe stitching is done specifically outside the stocking so the fabric inside that is in contact with the foot, is flat, smooth and soft, to avoid friction that may injure the skin. Made of COOLMAX® quick drying yarn to keep the skin of the foot, and the limb, cool and dry, thanks to excellent, body moisture management. Perspiration is conveyed outside for optimal comfort, maintaining prolonged freshness together with excellent breathability. The characteristics of this knee-high sock are suitable for diabetics with peripheral arteriopathy and/or neuropathy, in primary or secondary prevention and for non diabetics with fragile skin. The Diabetic knee-high sock does not replace the knee-high sock or the elastic stocking in patients with venous disease nor the "anti-thrombus" stocking in operated patients or undergoing operation.

COMPRESSION POINT

Stocking compression, better defined as elastic compression, is the force that the tights exert on the leg, helping blood circulation and enhancing the "pump effect". Compression is generally measured at specific points on the leg and is expressed in millimeters of mercury (**mmHg**).

Of course, the highest compression value is at the ankle, defined, in medical terminology, as point b. Then compression decreases as we move upwards. This is defined as graduated compression.

SOLIDEA, as its specific policy and with full respect for consumers, prints the compression value in **mmHg**, previously measured by qualified International Institutes, on all its packages of stockings and supports.

Compression classes in compliance with Experimental European Standards UNI ENV 12718

Class	mmHg
A	10-14
I	15-21
II	23-32
III	34-46
IV	>49

CLASS A prevention (10-14 mmHg) •predisposed subjects •swollen legs •telangiectasia •mild edemas.

CLASS I light (L15-17 mmHg) •varicose veins •acrocirosis •post telangiectasia sclerotherapy.

CLASS I strong (H 18-21 mmHg) •truncal varicose veins •varicose veins with important edemas •varicose vein surgical removal •post sclerotherapy •foot and knee arthrosis.

CLASS II (23-32 mmHg) •post thrombosis syndrome •during treatment of venous ulcers •post-trauma syndrome •angiodysplasia •deep venous thrombosis •deep venous insufficiency •reversible lymphedema •lipedema.

CLASS III (34-46 mmHg) •severe edema •chronic hypodermatitis •irreversible lymphedema.

CLASS IV (>49 mmHg) •for all the above-indicated pathologies in their most severe forms.

Orthopedic

Well-being with silver ions

BACTERIOSTATIC YARN

An inorganic silver-base bacteriostatic agent is inserted in the fibres and protected by a slow release system. This prevents bacteria from proliferating on fabrics. Silver ions perform their bacteriostatic function by preventing reproduction of pathogenic micro-organism (bacteria).

SILVER SUPPORT

SOLIDEA, always attentive to our body's well-being and health, presents the new line of SILVER SUPPORT elastic bandages for prevention and treatment of joint pathologies: knee, ankle, elbow and wrist. The products in this new line are all made of silver ions bacteriostatic yarn.

The experience accrued by SOLIDEA, which has always carried on a keen research and development activity to offer increasingly innovative and competitive products to the market. SOLIDEA has achieved an excellent marriage between the technical-structural characteristics of the weave and the premium quality raw materials, such as silver ions bacteriostatic yarn that ensures well-being and freshness.

Silver ions are permanently present in the fabric used in SOLIDEA SILVER SUPPORT products, maintaining long-term bacteriostatic characteristics.

SOLIDEA SILVER SUPPORT products maintain bacterial flora at natural levels, preventing the onset of unpleasant odors.

Sport

Graduated compression sports socks

SOLIDEA®

ACTIVE

Technological Socks

SOLIDEA has invented a new concept in graduated compression sportswear: unique high performance sports socks

three original models, many innovative concepts

-  micro massage
-  bacteriostatic
-  perspirant
-  odor control
-  heat insulating
-  shock absorbing
-  energizing

Graduated compression socks with patented micromassage fabric that activates blood circulation. The special three-dimensional wave knitted with a strong relief combines a micromassage action with ventilation improvement to ensure perfect skin transpiration, keeping feet always dry and at the right temperature in all seasons, preventing the onset of bad odors even after hours of wear. The tonic effect of the micromassage favors blood circulation to give well-being and energy. The active micromassage generated by the fabric leaves light furrows in the skin, a sign of its drainage efficiency.

These disappear after a few hours and leave the skin smooth and free of excess fluids. The stocking is made of bacteriostatic yarn with silver ions that blocks the proliferation of bacteria and helps maintain the biological balance of the skin. Designed to prevent venous insufficiency and especially recommended for all sports activities, reducing cramps and protecting varicose veins. They eliminate and forestall formation of lactic acid and its graduated compression avoids useless energy losses. For best wearability we advise to put on your socks with dry skin.

PATENTED MICROMASSAGE WEAVE

BACTERIOSTATIC

Bacteriostatic yarn that prevents proliferation of bacteria.

FOOT ODOR CONTROL

Product with skin ventilation and transpiration properties, preventing the onset of bad odors even after hours of wear.

MICROMASSAGE TRANSPIRANT

Special patented high-tech wave fabric where natural body movements exert an effective micromassage, stimulating microcirculation, reducing cramps and forestalling formation of lactic acid. A transpiring fabric that keeps feet dry and at the right temperature in all seasons.

Inner micromassage wave and heat-insulating weave

Outer weave with bacteriostatic yarn with silver ions

Weft that absorbs shocks and vibrations

For men

Very comfortable to wear

SM09 Nero

cod. 0300A5 *Panty Effect*

Get a competitive edge with these soft and comfortable high-tech compression shorts. The built-in compression improves circulation, tones muscles and enables improved mechanics of motion. Special yarns let you enjoy freedom of movement and fits like a second skin. Exclusive bacteriostatic fibres maintain natural skin balance regardless of activity level; reduces odour, prevents bacterial build-up and skin allergies. Breathable fabric transfers moisture away from skin for maximum comfort in hot or cold conditions. With flat seams.

Multiple horizontal lines for writing or notes.

The high quality of SOLIDEA products does not come from chance. Every single article is the result of a large experience, ceaseless research and experimentation, very careful controls and selection of the most valuable yarns to give today's women unique pleasure and exclusive comfort.

Solidea collection offers tights and stockings with graduated compression in different compression classes from 8/11 to 34/36 mmHg. Compression (elastic compression in our case) is the force exerted by the tights as they compress the leg, improve the pump effect and favoring blood circulation. Compression is measured at predetermined points and is expressed in millimeters of mercury (mmHg). When speaking of compression we specify graduated compression that decreases as we go up. The highest compression value is low down and, in particular, at the ankle bone. In medical language this is called point B. The compression rating indicated on packages, in millimeters of mercury, is measured at point B.

The CE mark is a mark that must be applied to certain types of products from the same manufacturer that it self-certifies compliance (or compliance) with the essential requirements for the marketing and use in the European Union. The affixing of a trademark is required by law in order to market the product in the acceding countries to the European Economic Area (EEA). SOLIDEA pantyhoses are certified as Class I medical devices and play a preventive and curative function for insufficient venous disorders.

SAFETY IS OUR MAIN CONCERN! The Oeko.Tex Standard 100 testing and certification system is granted by the only important International Association of textile research and test institutes and represents both an added value of Solidea and a guarantee for consumers. The Oeko-Tex Standard 100 100 certifies the absence in textile products of substances that may be carcinogenic, allergenic, irritant and more generally harmful to human health. Oeko-Tex Standard 100 is the most important label in the textile industry. Solidea follows every phase of the production process, constantly controlling the quality of the products and always using certificated raw material.

The Sanitized® hygiene function is integrated into the textiles! Sanitized® acts like a built-in deodorant and fights the development of perspiration odour and keeps clothing fresh longer. The Sanitized® hygiene function effectively prevents the growth of bacteria, even during heavy perspiration and brings more comfort and well-being into your everyday life.

CERTIFICATES & PATENTS

All certificates are issued by the most qualified institutes

SOLIDEA products are protected by international patents.
